COURSE OBJECTIVES:

- Enable participants to take into account the collective aspects of risk prevention (conventional and radiation), during work preparation phases, and before, during and after operations in restricted areas.

TARGET GROUP:

- The level 2 training is aimed at team managers appointed as works managers, or any person whose role could affect the collective safety of employees.
- Any team manager who works in a nuclear power plant.

PREREQUISITES:

- Participants must have already passed a level 1 training module for the corresponding option, and still possess a valid certificate from the training.
- They must prove they have worked on at least three separate occasions as operators, in restricted areas, in the relevant area.
- Participants must be able to read and speak in the language the training is given in.

CONTENT:

- Awareness of one's position within facilities and the Operator's organization.
- Assessing the consequences of radiation risks for teams and individuals.
- Preventing risks.
- Accessing and operating in work sites, entering and exiting Restricted Areas.
- Reacting in deteriorated situations.

TEACHING APPROACH:

- The methods used are: participative and interactive group sessions, instructional presentations, discovery-based teaching.
- This training provides practice in applying basic rules, based on case studies and exercises.

*Evaluation: written test in field schools to determine whether the trainee meets the minimum requirements to be awarded the **SATISFACTORY** pass mark. If the minimum requirements are not met, the employer will be notified the employee has received an **UNSATISFACTORY** mark, defining if necessary the possibilities for remedial training.*

Certificate for successful completion of course.
